ICC Conclave on

Data Governance and Cyber Security

10:30 AM November 18, 2022,

Hotel Sonar Tori , Agartala

Programme

Data Governance is establishing, monitoring and sometimes enforcing policies, procedures, standards and guidelines that are related to the overall management of enterprise data, with the goal of sustainably ensuring data availability, usability and security. Data architecture will be the formal structure for managing data flow. Data security consists of the processes put in place to protect the data from unauthorized access or corruption. In today's gig economy there is a need to discuss the policies for data governance and cyber security.

In the long run, it would be ideal to develop a Data Governance Quality Index which checks levels of Data Preparedness across organizations, Private or Government across time and geographic limits.
